

Now booking projects for Q4 2026

Websites, apps and SEO that turn visitors into customers.

Kurchu Software Solutions designs, builds and grows digital products for businesses worldwide. One team from the first sketch to the first page of search results.

Get a project quoteSee our work

- ✓ Fixed-scope quotes before any work starts
- ✓ You own the code, design files and content
- ✓ Support and reporting after launch

Built with the tools modern teams trustNext.jsReactTypeScriptFlutterSupabaseFirebaseWordPressShopify

Three services, one team that connects them.

Your website, your app and your search rankings affect each other. We plan them together, so every build is fast, findable and easy to grow.

Website development

Fast, accessible websites designed around what your customers need to do next: call, book, buy or enquire.

- ✓ Business and corporate sites
- ✓ Custom web applications
- ✓ Headless CMS and WordPress
- ✓ E-commerce stores
- ✓ Landing pages for campaigns
- ✓ Redesigns and speed fixes

Next.js · React · WordPress · ShopifyExplore website development

App development

iOS and Android apps from a single codebase, with the admin tools your team needs behind them.

- ✓ Cross-platform apps in Flutter
- ✓ Booking, ordering and delivery apps
- ✓ Admin dashboards and backends
- ✓ App Store and Play Store launch

Flutter · Supabase · FirebaseExplore app development

SEO services

Get found on Google, in maps and in AI answers. We fix the technical foundations, then publish the pages and content that win the searches your customers make.

- ✓ Technical SEO audits
- ✓ Content and landing pages
- ✓ Link building and citations
- ✓ Local SEO and Google Business Profile
- ✓ AI search optimisation
- ✓ Monthly ranking reports

How a project runs

Clear stages, a shared project board and a staging link you can open any time.

Step 1

Discovery call

We learn your goals, customers and competitors, then send a written proposal with scope, timeline and price.

Step 2

Design

Wireframes and full UI designs that you review and approve before development starts.

Step 3

Build and test

Development in weekly sprints, with SEO, speed and accessibility checked as we go.

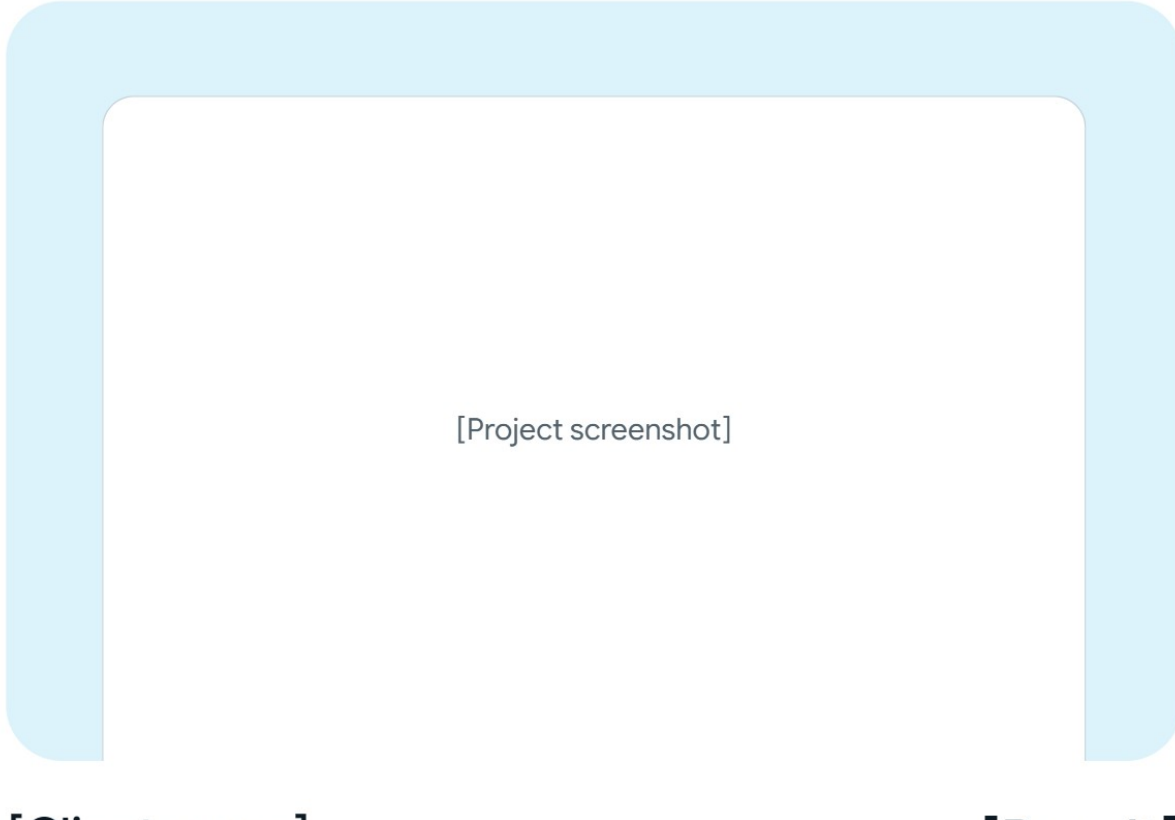

Step 4

Launch and grow

We go live, hand over everything you own, and track rankings and leads in a monthly report.

Questions before you start

How long does a website take?

It depends on scope. A business website usually takes [X-Y weeks], and e-commerce or custom builds take longer. Your proposal includes a week-by-week timeline.

Do you work with clients outside Pakistan?

Will I own the website and code?

When will SEO show results?

Can you take over an existing site or app?

Tell us about your project

We reply within one business day with next steps.

See website projects

Included in every website

- ✓ **Custom design**
Built around your brand, not a theme.
- ✓ **Mobile-first and fast**
Tested against Core Web Vitals before launch.
- ✓ **On-page SEO setup**
Metadata, schema, sitemap and redirects.
- ✓ **Analytics and lead tracking**
See which pages bring calls and forms.
- ✓ **Editable content**
Update pages yourself, with a short training call.

What we build

Business websites

Service pages, location pages, reviews and quote forms for companies that win work locally or across regions.

Typical timeline
[X weeks]

Starting at
[Price]

E-commerce stores

Online shops on Shopify, WooCommerce or a custom build, with payments, shipping rules and product search.

Typical timeline
[X weeks]

Starting at
[Price]

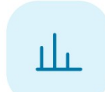

Web applications

Customer portals, booking systems, dashboards and SaaS products with accounts, roles and integrations.

Typical timeline
[X weeks]

Starting at
[Price]

Landing pages

Focused pages for ad campaigns and launches, built to be tested and improved against conversion goals.

Typical timeline
[X weeks]

Starting at
[Price]

Built to current web standards, checked before launch.

A launch checklist covers speed, accessibility, security and search, and you get the results in writing.

Performance

Core Web Vitals in the green on mobile and desktop.

Accessibility

Designed and tested against WCAG 2.2 AA.

Search and AI

Structured data so Google and AI assistants understand your pages.

Security

HTTPS, spam-protected forms and backups from day one.

The stack we build on

Front end
Next.js, React, TypeScript, Tailwind CSS

Content
WordPress, headless CMS

Commerce
Shopify, WooCommerce, Stripe

Hosting
Vercel, Cloudflare, Supabase
